

Custom AI Chat System with Admin-Controlled Knowledge

Objective

- To develop a secure, self-contained AI chatbot application that allows:
- Admins to train the AI model with typed inputs or uploaded documents.
 - Users to ask questions or provide documents for temporary use, but the model will only be aware of the knowledge explicitly fed by the admin.

The AI will operate in a restricted, knowledge-bounded manner using Ollama and Retrieval-Augmented Generation (RAG) techniques.

User Roles

Role	Capabilities
Admin	Upload and manage documents Add/update knowledge manually Retrain/update vector database Control what the AI knows
User	Chat with the AI (questions based on admin data) Upload personal files temporarily to ask questions Cannot influence AI knowledge base

Architecture Overview

System Architecture:
